

Task: Create a Basic Responsive Website with Two Pages

Task Objective

Demonstrate your understanding of responsive web design by building a simple two-page website that adapts appropriately to different screen sizes.

Task Description

Using the website concept you developed in Task 1.1P, create a responsive website consisting of:

- an index page (homepage), and
- one additional page that relates to your website concept.

This task focuses on the practical application of core responsive design principles. Your website should demonstrate that you can build a simple, usable, and well-structured site using **separate HTML and CSS files**.

Page Requirements

Important Note: **DO NOT** use placeholder text such as Lorem Ipsum. Your webpages must contain real, fictional content relevant to your website concept from Task 1.1P.

Homepage (index.html) must include:

- A header (e.g., site title and/or logo)
- A navigation menu linking to your second page
- A main content area with at least three distinct content sections. These may include, for example, a hero section, an about section, and a features or services section.
- A footer.

Second page must:

- Relate to the same website concept
- Use the same visual style as the homepage
- Include at least one content section
- Respond appropriately to different screen sizes

Responsive Design Requirements

Your pages must demonstrate all of the following:

Requirement	Details
Viewport meta tag	Include in the <head> of every HTML file
Mobile-first CSS	Write base styles for small screens first, then use media queries to adjust for larger screens
Relative units	Use rem, %, or vw where appropriate instead of fixed px values
At least one media query	Layout must visibly change at a defined breakpoint
Responsive layout behaviour	Content stacks vertically on small screens and shifts to a wider layout on larger screens

Technical Checklist

Before submitting, confirm your project includes:

- ☐ webpages contain real, fictional content relevant to your website concept
- ☐ index.html and one additional .html page, linked to each other
- ☐ At least one external .css file linked to both HTML pages
- ☐ Viewport meta tag in the <head> of each page
- ☐ A navigation menu present on both pages
- ☐ At least three content sections on the homepage
- ☐ At least one content section on the second page

- 
- ☐ Mobile-first base styles
 - ☐ At least one media query
 - ☐ Relative units (rem, %, or vw) used where appropriate
 - ☐ Layout is readable and usable on both mobile and desktop
-

Deliverable

Submit the following files:

1. index.html
2. Your second HTML page (e.g., about.html)
3. Your CSS file (e.g., styles.css)
4. Four screenshots for marking purposes:
 - Homepage at mobile size (≤ 480 px wide)
 - Homepage at desktop size (≥ 1024 px wide)
 - Second page at mobile size (≤ 480 px wide)
 - Second page at desktop size (≥ 1024 px wide)

How to take screenshots: Use your browser's built-in DevTools (press F12, then toggle the device toolbar) to simulate different screen sizes.
