

Task: Enhance Your Responsive Website

Task Objective

Demonstrate your ability to improve a responsive website by applying flexible layout techniques, a responsive table, and stronger visual organisation across multiple screen sizes.

Task Description

Based on the website concept developed in **Task 1.1P**, use the pages you created for **Task 5.1P** as the starting point for this task. Improve and extend your website so that it demonstrates more advanced responsive design techniques, clearer organisation, and better usability across different screen sizes.

Your website should build on the same concept, structure, and content direction established in Task 5.1P, while showing more thoughtful layout decisions and responsive behaviour.

This task is intended to demonstrate that you can make practical design decisions that improve layout quality, usability, and responsiveness.

Task Instructions

⚠ **Important Note:** **DO NOT** use placeholder text such as Lorem Ipsum. Your webpages must contain real, fictional content relevant to your website concept from Task 1.1P.

Layout & Structure

- Improved use of **Flexbox** or **CSS Grid** to organise page content
- A clearly structured layout that visually separates page sections
- At least two breakpoint-driven layout changes across different screen sizes, such as a single-column layout on mobile and a multi-column layout on desktop.
- Improved spacing, alignment, and visual hierarchy throughout

Navigation

- A responsive navigation menu that remains usable on both mobile and desktop screens

Responsive Table

- At least **one responsive table** on either page that:
 - Presents information relevant to your website concept
 - Remains readable on smaller screens
 - Uses an appropriate responsive technique such as horizontal scrolling using `overflow-x: auto` or a column-stacking approach implemented with CSS.

General

- Continued use of responsive units such as `rem`, `%`, and `vw` where appropriate.
-

Written Explanation

Include a short written explanation of approximately **150–200 words** in a separate PDF file. Your explanation should describe:

- How your layout decisions support the needs of your users
 - How your responsive table handles smaller screen sizes
 - Any significant changes you made compared to your Task 5.1P submission
-

Technical Checklist

Before submitting, confirm your project includes:

- ☐ `index.html` and one additional `.html` page
- ☐ At least one external `.css` file linked to both pages
- ☐ Flexbox or CSS Grid used to organise layout
- ☐ At least two responsive layout changes across screen sizes
- ☐ Responsive navigation on both pages
- ☐ At least one responsive table
- ☐ Responsive units used where appropriate (`rem`, `%`, `vw`)
- ☐ Real, fictional content — no placeholder text
- ☐ Written explanation included

Deliverable

Submit the following files:

1. index.html
2. Your second HTML page (e.g., about.html)
3. Your CSS file (e.g., styles.css)
4. **Four screenshots** for marking purposes:
 - Homepage at **mobile size** (≤ 480 px wide)
 - Homepage at **desktop size** (≥ 1024 px wide)
 - Second page at **mobile size** (≤ 480 px wide)
 - Second page at **desktop size** (≥ 1024 px wide)
5. Your **written explanation** (pdf file)

How to take screenshots: Use your browser's DevTools (F12) and toggle the device toolbar to simulate different screen sizes.
