

Task: Plan and Design a Form Page for Your Website

Task Objective

To extend your website plan from Task 1.1P by adding a form page to your site, updating your site diagram, and creating a wireframe that shows how the form supports your users.

Task Description

In Task 6.1P, you built a responsive HTML form using a guided starter file. That form was based on a fictional Ice Cream concept — not your own website.

In this task, you will return to your Task 1.1P Website Planning & Design and extend it to include a form page designed specifically for your own website concept. You will update your completed Task 1.1P template with an updated site diagram to show where the new page fits, create a wireframe for the form page, and write a short justification explaining how the form serves your users.

This task is about demonstrating that a form page is a deliberate, user-focused design decision — not just a technical exercise. Your form should collect information that is genuinely relevant to your website's purpose and users.

⚠ Important Note: Do NOT start a new document. Open your submitted Task 1.1P document and add the required sections below. Submit the updated document as Task 6.2C.

Task Instructions

Add the following three sections to your existing completed Task 1.1P Website Planning & Design template:

1. Updated Site Diagram

Return to the site diagram and update it to include your new form page:

- Add the new form page to the diagram
- Use **arrows and arrowheads** to show how the form page links to and from your existing pages

- Label the new page clearly (e.g., "Contact Form", "Booking Form", "Registration Page")

⚠ **Note:** The diagram should reflect how a user would actually navigate to and from the form page within your website.

2. Wireframe for the Form Page

Create a **low-fidelity wireframe** for your new form page, consistent with the wireframing approach used in Task 1.1P. Your wireframe must include:

- Header and navigation
- The form itself, showing:
 - Field labels and input areas
 - At least one group of related fields (e.g., personal details, preferences)
 - A reset button
 - A submit button
- Footer
- **Annotations** explaining key design decisions — for example, why certain fields are grouped, or why a particular input type was chosen

3. Form Purpose Justification

Write a short paragraph of approximately **100–150 words** that addresses:

- What the form is for and what information it collects
- Which of your **user personas** from Task 1.1P would use this form and why
- How the form supports the overall **site aim** established in Task 1.1P

⚠ **Note:** A strong justification connects the form directly to your users' needs and your website's goal — it should not simply describe the form fields.

Technical Checklist

Before submitting, confirm your updated document includes:

- ☐ Updated site diagram showing the new form page
 - ☐ Arrows and arrowheads showing how pages link together
 - ☐ New form page clearly labelled
 - ☐ Low-fidelity wireframe for the form page
 - ☐ Wireframe includes header, navigation, form fields, reset button, submit button, and footer
 - ☐ Wireframe is annotated with design decisions
 - ☐ Form purpose justification (100–150 words)
 - ☐ Justification references your user personas from Task 1.1P
 - ☐ Justification connects the form to your site aim from Task 1.1P
 - ☐ All original Task 1.1P content is still present and intact
-

Deliverable

Submit your **updated Task 1.1P completed template** as a **single PDF file**, with the three new sections added.

 **Note:** Your original Task 1.1P content must remain intact. Only add the new sections — do not remove or replace any existing content.
