

Task: Create a Polished Three-Page Responsive Website

Task Objective

Demonstrate advanced understanding of responsive web design by producing a polished, user-focused website with strong layout consistency, usability, and responsive behaviour across three linked pages.

Task Description

Using the pages you built for **Task 5.1P** and **Task 5.2C** as your starting point, expand your website to **three linked pages** and refine the overall design to demonstrate a high level of responsiveness, clear visual hierarchy, and a coherent user experience.

Your website should show thoughtful use of layout systems, typography, spacing, and responsive behaviour. It should be refined enough to present to a real user.

Task Instructions

⚠ Important Note: **DO NOT** use placeholder text such as Lorem Ipsum. Your webpages must contain real, fictional content relevant to your website concept from Task 1.1P.

Pages and Structure

- Three linked pages based on your website concept.
- Consistent layout, navigation, and visual style across all three pages.
- Clear semantic HTML structure throughout, such as <header>, <nav>, <main>, <section>, and <footer>.

Layout and Design

- Effective use of Flexbox, CSS Grid, or both to organise content.
- Strong visual hierarchy using headings, spacing, colour, and alignment.
- A professional and consistent visual style across all pages.

Responsive Behaviour

- At least two breakpoints, for example one targeting mobile and one targeting desktop.

- Responsive images that scale without distorting or overflowing.
- Typography that remains readable across screen sizes, using rem units or fluid type scaling where appropriate.

Responsive Table

Include at least one responsive table that:

- suits the purpose of the page it appears on,
- presents real, relevant content,
- remains readable and usable on smaller screens,
- and is visually integrated into the overall page design.

Code Comments

Add comments in your CSS file explaining your key responsive decisions. Comments should explain why a decision was made, not just what the code does.

Written Reflection

Include a written reflection of approximately **250–300 words** submitted as a separate .pdf file. Write in **clear paragraphs** and address all of the following:

- **Your target users** identified in your **1.1P task** — Who is this website for? What are their needs, and how did those needs shape your design decisions?
 - **Note** that if this evolved or changed over time, state so and explain why.
- **Your responsive decisions** — How does your layout, typography, and responsive behaviour support your users across different screen sizes?
- **Your design progress** — How did your website improve from Task 5.1P through to Task 5.3D? What specific changes did you make and why?
- **Trade-offs or challenges** — What was difficult or required compromise? For example: "I wanted a three-column layout on mobile but found it unreadable, so I switched to a single column with a media query at 768px."

⚠ Note: A strong reflection explains your **reasoning and decisions**, not just what you built. Avoid simply describing your code — focus on **why** you made the choices you did.

Technical Checklist

Before submitting, confirm your project includes:

- ☐ Three linked HTML pages: index.html and two additional pages.
 - ☐ At least one external .css file linked to all pages.
 - ☐ Consistent navigation across all three pages.
 - ☐ Semantic HTML structure on all pages.
 - ☐ Flexbox or CSS Grid used for layout.
 - ☐ At least two media query breakpoints.
 - ☐ Responsive images with max-width: 100%.
 - ☐ Readable typography across screen sizes.
 - ☐ At least one responsive table integrated into the design.
 - ☐ Real, fictional content — no placeholder text.
 - ☐ Code comments explaining key responsive decisions.
 - ☐ Written reflection included.
-

Deliverable

Submit the following files:

1. **index.html**
2. A **second** HTML page, such as about.html
3. A **third** HTML page, such as contact.html, or another page relevant to your concept
4. Your **CSS** file, such as styles.css
5. **Six screenshots** for marking purposes:
 - Homepage at **mobile size** ($\leq 480\text{px}$ wide)
 - Homepage at **desktop size** ($\geq 1024\text{px}$ wide)
 - Second page at **mobile size** ($\leq 480\text{px}$ wide)
 - Second page at **desktop size** ($\geq 1024\text{px}$ wide)

- Third page at **mobile size** ($\leq 480\text{px}$ wide)
- Third page at **desktop size** ($\geq 1024\text{px}$ wide)

6. Your **written reflection** (pdf file)

How to take screenshots: Use your browser's DevTools (F12) and toggle the device toolbar to simulate different screen sizes.
