

Task 2.2P

I extracted the linked resource file from Cloud Deakin.

The screenshot shows a terminal window on the left and a code editor on the right. The terminal shows the following commands and output:

```
[athena@arch node_server_template]$ pwd
/mnt/1A8E55ED8E55C1C5/ComputerFiles/Documents/Github/hir
[athena@arch node_server_template]$ ls
index.js package.json public_html
[athena@arch node_server_template]$ npm install

added 68 packages, and audited 69 packages in 3s

15 packages are looking for funding
  run `npm fund` for details

found 0 vulnerabilities
[athena@arch node_server_template]$ npm run start

> web-server@1.0.0 start
> node .

Web server running at: http://localhost:3000
Type Ctrl+C to shut down the web server
^C
```

The code editor on the right shows the `package.json` file with the following content:

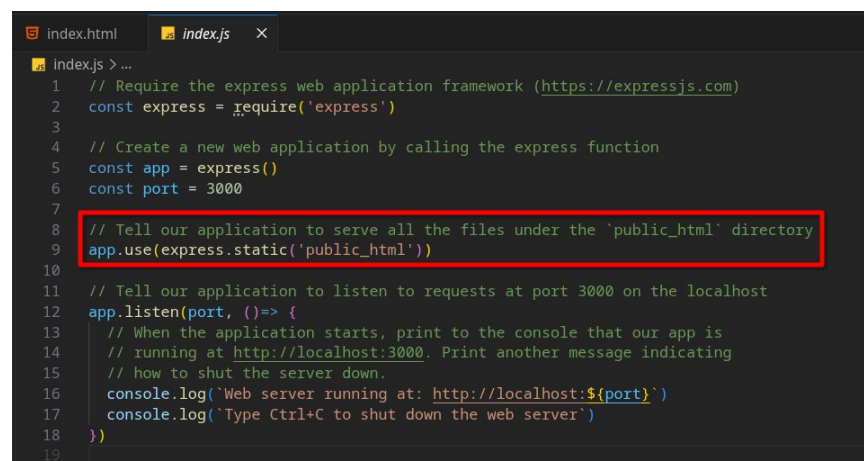

```
{
  "name": "web-server",
  "version": "1.0.0",
  "description": "Starter express web server template",
  "main": "index.js",
  "scripts": {
    "start": "node .",
    "test": "echo \\\"Error: no test specified\\\" && exit 1"
  },
  "keywords": [
    "node",
    "web",
    "server",
    "template",
    "sit774"
  ],
  "author": "SIT774",
  "license": "ISC",
  "dependencies": {
    "express": "^4.18.3"
  }
}
```

As seen in the `package.json` file, the main file is set to `index.js` (which has the expressjs code).

"main": "index.js"

Therefore, running `node .` would just run that file and an equivalent command to that would be `node index.js`. However, the script "start" has been set to `node .` as seen in the screenshot above. Therefore, we can just run it following the standard way by running `npm run start`, which would just run that command.

It's just a simple Express JS app that serves the contents inside of the `public_html` directory as static files.

The screenshot shows a code editor with the `index.js` file open. The code is as follows:

```
1 // Require the express web application framework (https://expressjs.com)
2 const express = require('express')
3
4 // Create a new web application by calling the express function
5 const app = express()
6 const port = 3000
7
8 // Tell our application to serve all the files under the 'public_html' directory
9 app.use(express.static('public_html'))
10
11 // Tell our application to listen to requests at port 3000 on the localhost
12 app.listen(port, () => {
13   // When the application starts, print to the console that our app is
14   // running at http://localhost:3000. Print another message indicating
15   // how to shut the server down.
16   console.log(`Web server running at: http://localhost:${port}`)
17   console.log(`Type Ctrl+C to shut down the web server`)
18 })
19
```

My submission contains a vanilla HTML document, and was written using the assistance of emmet abbreviations in VS Code to make my life easier. I added line breaks (even though it might not really be required) to keep my solution as identical as I can to the screenshot mentioned in the task sheet.

A screenshot of my page can be found in the next page —>

Bibiliography

My name is Hirusha. I study a Bachelor of Cybersecurity at Deakin University and when not programming web pages in HTML, I like learning more about tech.

One of my favourite quotes is by Terry A. Davis:

"An idiot admires complexity, a genius admires simplicity, a physicist tries to make it simple, for an idiot anything the more complicated it is the more he will admire it"

I like this quote because it highlights the importance of simplicity!

University

My Units

This Trimeser, I am studying: *SIT120 Introduction to Responsive Web Apps*, *SIT202 Computer Networks and Communication*, *SIT218 Secure Coding*, and *SIT281 Cryptography*.

I am sure SIT120 will be my favourite!

My Timetable

Classes

On Mondays, between 0800 to 1050, I have a class for SIT218.

On Mondays, between 1100 to 1350, I have a class for SIT281.

On Mondays, between 1400 to 1650, I have a class for SIT202.

Online Classes

On Tuesdays, between 0900 to 0950, I have an online class for SIT120.

Workshops

On Fridays, between 1400 to 1550, I have a workshop for SIT120.

On Fridays, between 1700 to 1900, I have the weekly DUCA event.
