

## **Task: Create an HTML form web page**

### **Task Objective**

To create a responsive HTML form using semantic HTML and CSS. You will complete the missing form controls, apply appropriate validation, and use CSS to create a clear responsive layout.

---

### **Task Description**

You are provided with a starter HTML file that includes most of the page structure and form layout, with comments indicating where students need to complete missing code. You are also provided with a starter CSS file containing selectors and comments. Your task is to complete the missing HTML form controls and add the CSS styling required to make the form responsive and visually clear on both large and small screens.

The page should replicate the Ice Cream Membership Registration Form shown on the next page. The form must rearrange neatly when the screen size is reduced.

# World of Ice Cream

Order your delicious ice cream here and it will be ready in a snap!

## Membership Registration Form

### Login details to be used

|                      |                          |
|----------------------|--------------------------|
| Email                | Password                 |
| <input type="text"/> | <input type="password"/> |

### Contact Details

|                      |                      |
|----------------------|----------------------|
| Firstname            | Surname              |
| <input type="text"/> | <input type="text"/> |

|                                        |                                         |
|----------------------------------------|-----------------------------------------|
| Mobile                                 | Birth Date                              |
| <input type="text" value="10 digits"/> | <input type="text" value="dd/mm/yyyy"/> |

Address

Address 2

## Requirements

---

**Important Note:** The colours used to complete the page do not need to match the example screenshot. You may choose any colours you prefer.

---

**When completing this form, take into account the following requirements:**

1. Consider the data being requested for each field and ensure the **relevant controls** and **form validation** are used. For example:
  - the phone number field should only accept numbers and be limited to 10 digits,
  - the email address field should accept valid email addresses,
  - use a date input field for the birthday.
2. Ensure **all required fields** are completed before the form can be submitted.
  - Use the **required** attribute in HTML
3. The form should be responsive, and the labels and fields should arrange properly when the screen is reduced to a smaller size.
4. The submission or posting of the form contents is not part of this task. You only need to complete the missing parts of the structure, layout, input controls, and CSS styling.

## Resources

Clicking the **Resources button** in **OnTrack** for this task will download a zip file containing:

- a starter HTML file with most of the page structure and form layout,
- a starter CSS file with the required selectors and a responsive scaffold, including helpful comments to guide you.

You will need to complete the missing HTML form controls and the CSS styling.

---

## Hints

- Use standard HTML form elements such as **input**, **select**, **textarea**, **radio**, and **checkbox**.
  - Use CSS Grid or Flexbox to create the form layout.
  - Use a media query to adjust the layout for smaller screens.
  - Use suitable spacing with margins and padding to improve the presentation.
  - Use **select** elements for fields that have multiple possible choices.
  - Make sure form controls fill the available width where appropriate.
  - Bootstrap is not required for this task.
- 

## Checklist

Before submitting, confirm your project includes:

- ☐ A completed index.html file.
- ☐ A completed styles.css file.
- ☐ A responsive form layout that works on both desktop and mobile screens.
- ☐ Appropriate form controls for each field, such as email, date, select, radio buttons, and checkboxes.
- ☐ Required fields marked correctly.
- ☐ Phone number and postcode fields limited to the expected number of digits.
- ☐ Email field uses correct input type and accepts valid email addresses
- ☐ Birth date field uses the date input type
- ☐ **Form submission/posting is not required. Use built-in HTML validation only.**
- ☐ At least one screenshot of the form on a large screen.
- ☐ At least one screenshot of the form on a smaller/mobile screen.

- 
- ☐ A screenshot showing form validation when invalid input is entered.
  - ☐ All files saved with the correct names and linked correctly.
  - ☐ Any comments or placeholder text left in the starter files completed or removed as required.
- 

**Deliverable:**

Submit the following files:

- a screenshot of the web page on a large screen showing the form with data entered,
- a screenshot of the page on a smaller mobile screen size,
- a screenshot showing that form validation worked when invalid input was entered,
- the completed HTML source code file,
- the completed CSS source code file.
