

# Setting up the virtual environment

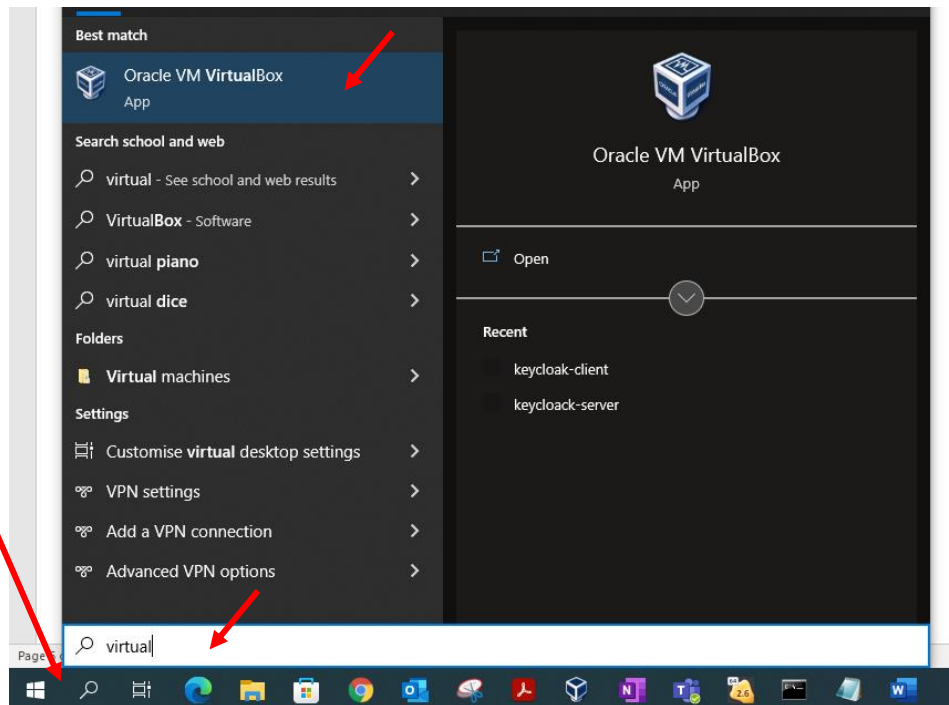

To complete the workshop tasks set forth in this unit, you will need the following:

1. **On-campus using lab computers:** If you are using on-campus lab computers access the Kali-Linux-2022-SIT218 VM. You need to import OVA file to Oracle Virtual box (No need to download). Complete the steps as mentioned below **“Importing Kali-Linux-2022-SIT218 file into virtual box”**
2. **Installing on a personal computer:** Setup Oracle VM virtual box (virtualisation software) on your personal computer. Download the OVA files and complete the steps as mentioned in this document. The link for the OVA file is provided in the CloudDeakin week-1 content.

## **## Importing Kali-Linux-2022-SIT218 file into virtual box**

You can now import the file to Oracle Virtual box to add the virtual machine. To import the OVA files, perform the following steps.

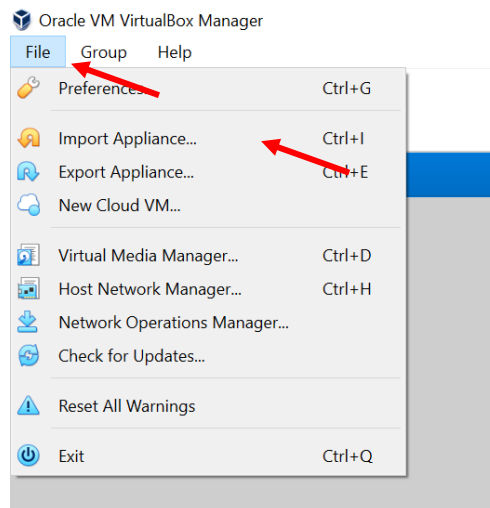

1. Launch Oracle Virtual Box by typing “virtual” after clicking on windows start menu button. Now click on the virtualbox App.

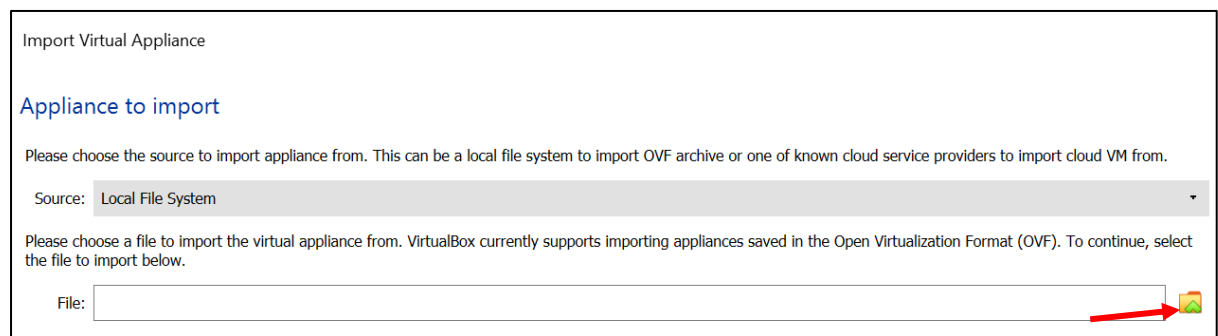

2. You will now see the virtualbox interface

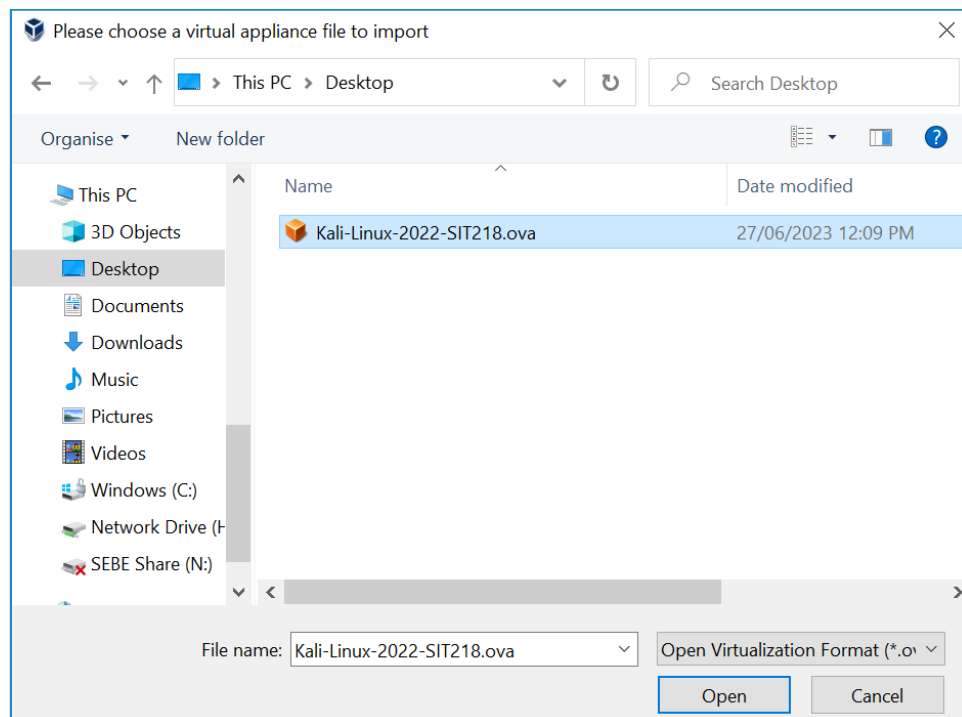

3. Now click on File menu in the top left corner. You will be show the available options under the file menu.

#### 4. Select Import Appliance.. option.

#### 5. In the import virtual appliance screen, click on the folder icon and you will be see the file browser screen.

#### 6. Navigate to the folder where you downloaded the OVA file and select the file and click Open.

← Import Virtual Appliance

### Appliance to import

Please choose the source to import appliance from. This can be a local file system to import OVF archive or one of known cloud service providers to import cloud VM from.

Source: Local File System

Please choose a file to import the virtual appliance from. VirtualBox currently supports importing appliances saved in the Open Virtualization Format (OVF). To continue, select the file to import below.

File: \\nsye.homes.deakin.edu.au\my-home\UserData\Desktop\Kali-Linux-2022-SIT218.ova

7. Now click on Next. You will see the configurations of virtual machine you are importing.

← Import Virtual Appliance

### Appliance settings

These are the virtual machines contained in the appliance and the suggested settings of the imported VirtualBox machines. You can change many of the properties shown by double-clicking on the items and disable others using the check boxes below.

| Virtual System 1                                              |                                                                         |
|---------------------------------------------------------------|-------------------------------------------------------------------------|
| Name                                                          | Kali-Linux-2022-SIT218 1                                                |
| Description                                                   | Kali Rolling (2022.2) x64...                                            |
| Guest OS Type                                                 | Debian (64-bit)                                                         |
| CPU                                                           | 2                                                                       |
| RAM                                                           | 4096 MB                                                                 |
| DVD                                                           | <input checked="" type="checkbox"/>                                     |
| USB Controller                                                | <input checked="" type="checkbox"/>                                     |
| Sound Card                                                    | <input checked="" type="checkbox"/> ICH AC97                            |
| Network Adapter                                               | <input checked="" type="checkbox"/> Intel PRO/1000 MT Desktop (82540EM) |
| Storage Controller (IDE)                                      | PIIX4                                                                   |
| Storage Controller (IDE)                                      | PIIX4                                                                   |
| <input checked="" type="checkbox"/> Storage Controller (SATA) | AHCI                                                                    |
| Virtual Disk Image                                            | Kali-Linux-2022-SIT218-disk001.vmdk                                     |
| Base Folder                                                   | C:\Users\nsye\VirtualBox VMs                                            |
| Primary Group                                                 | /                                                                       |

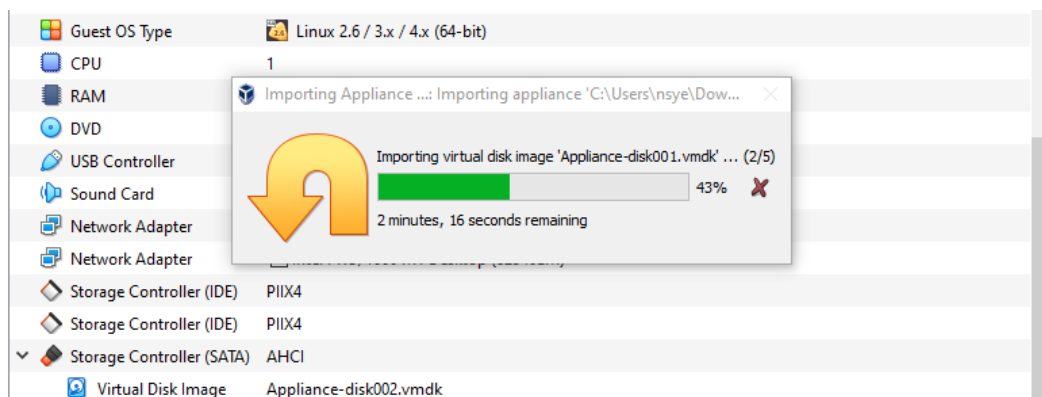

Machine Base Folder: C:\Users\nsye\VirtualBox VMs

MAC Address Policy: Include only NAT network adapter MAC addresses

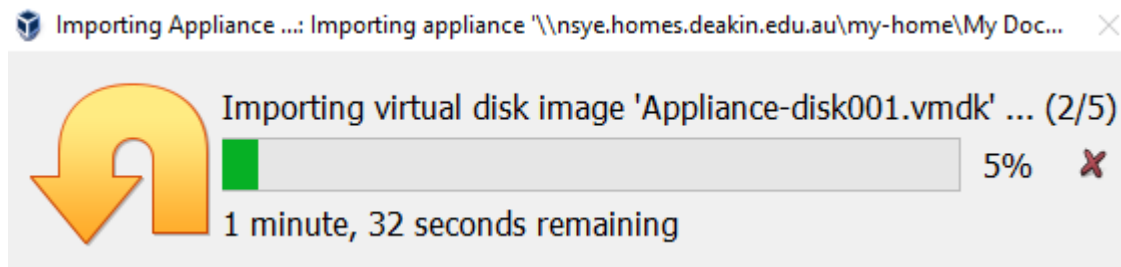

Additional Options: ☒ Import hard drives as VDI

Appliance is not signed

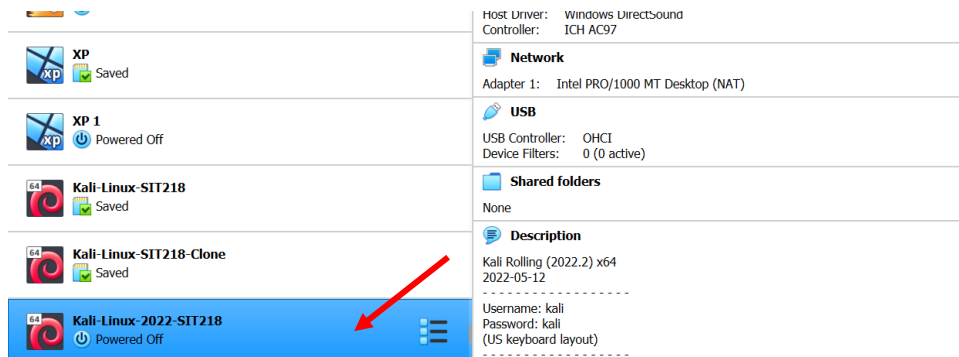

8. Click on finish button.

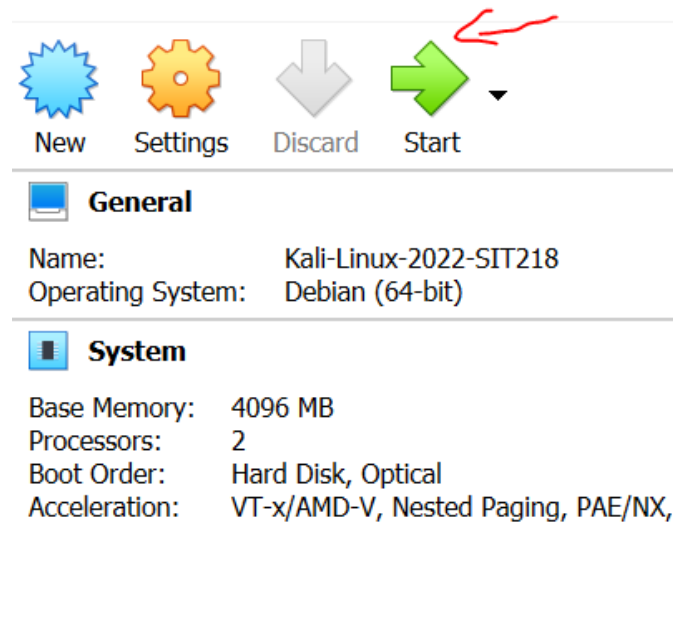

9. Wait until the virtual machines are extracted

10. You will now see the virtual machine imported into Virtual box.

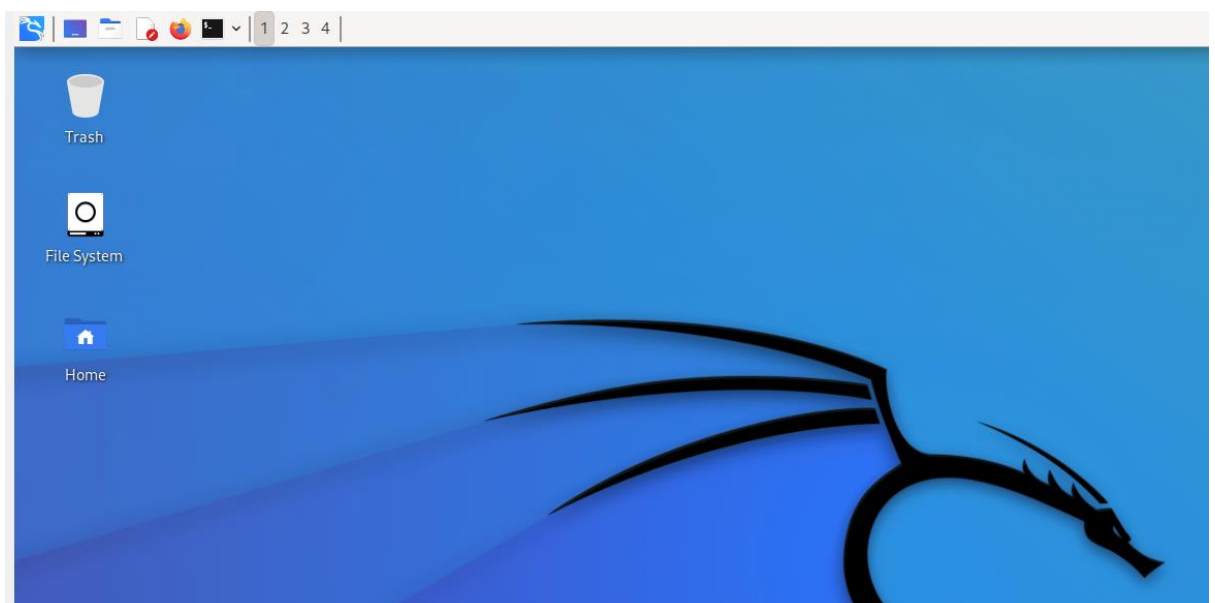

11. Select the Kali-Linux-2022-SIT218 machine and click Start on the right panel to boot the virtual machine.

**Enter the username as 'kali' and password as 'kali'**

12. Once logged in, you will see the below screen in virtual box window.

13. Open a web browser and check if you are able to connect to the Internet.
