
Task: Website Planning & Design

Task Objective

To develop a clear, user-focused plan for a website by defining its purpose, understanding its target users, and making informed design decisions before implementation.

Task Description

In this task, you will plan your website before building it. You will define the site aim, identify your target users through personas, and create user stories based on their needs. You will also establish a basic visual style, including colour, typography, and imagery.

Your work should show how your design decisions are informed by your users and the overall goal of the website. This planning will guide your final website in later tasks.

Note: You must submit this task using the **provided template** available in the **Resources** section of this task on **OnTrack**.

Part 1: Project Concept & Scope

This section defines the purpose of your website and what it needs to achieve. This will guide all decisions in later sections.

1.1 — Project Brief

- Write 150–200 words describing the website you will design and later build.
- Explain what the website does, who it is for, and why it needs to work across different screen sizes (responsive design).

1.2 — Site Aim (Business Goal)

- State the overall purpose of the website from the owner's perspective.
- This should be a single, clear statement describing what the website is intended to achieve.

Note: **Avoid vague aims** such as “to promote.” **Ask why** — the real goal is **usually to gain clients, increase sales, or grow revenue**.

1.3 — User Goals (UX / Design Goals)

- List 5 specific goals for your site. Each goal should **describe a user outcome**, **NOT** a **feature**.

Part 2: User Research & User Stories

Now that you've defined your website's aim and goals, this section identifies who your target users are and what they need. Your personas and user stories will be informed by, and should validate, the goals you set in Part 1.

2.1 — Target Audience Personas

- Define 2 distinct user personas. Include: name, age, tech literacy, primary device, and needs.

2.2 — User Stories

- Write **4** user stories. At least **2** must describe situations where the user is accessing the website on a mobile device or while on the move.
 - As a/an [**who**], I want to [**what**], so that [**why**]

Part 3: Visual Style Guide

This section translates your understanding of users and goals into visual design decisions.

3.1 — Colour, Typography & Visual Style

- Include:
 - A colour palette (primary, secondary, accent) showing each colour as a small block or sample (colour swatches):

- Two fonts (heading + body) with sample text
 - 2 images, icons, or graphics (include references and ensure correct licensing)
- Write 2–3 sentences explaining:
 - The tone or mood (e.g., professional, playful, modern)
 - How your choices suit your target users and site aim

Part 4: Wireframing

This section brings everything together by turning your ideas, users, and design choices into a layout.

- Create wireframes for at least 3 key pages, for example, a homepage (index.html), a content page, and a contact/about page.
- **Requirements:**
 - Low fidelity (boxes, labels, placeholders)
 - Include:
 - Header
 - Content (placeholders)
 - Images
 - CTAs
 - Footer
 - Add annotations
 - Show hierarchy, for example:

- **Guidance:**
 - Sketch by hand OR use digital tools
 - Hand-drawn is encouraged, as it helps you focus on layout and ideas rather than design details.

Free, beginner-friendly tools: [Figma](#), [wireframe.cc](#), or [Balsamiq Wireframes](#)

- Focus on layout and usability
- Think about how users will move through your site (user journey)
- Keep designs clear and easy to understand

Deliverable:

- Submit **one completed PDF** document using the **provided template**. Ensure all four parts are fully completed, including wireframes and visual elements.
