

Task: Build and Integrate a Responsive Form Page

Task Objective

To build a responsive form page for the website concept developed in Task 1.1P and integrate it into the three-page website built in Task 5.3D.

Task Description

In Task 6.2C, you planned a form page for your website by updating your site diagram and creating a wireframe. In this task, you will **build that form page** using HTML and CSS and **add it as a fourth page** to your existing Task 5.3D website.

Your form page should:

- Reflect the wireframe and plan you created in Task 6.2C. If your design evolved during development, briefly note the changes and reasons in your code comments.
- Match the visual style of your existing website
- Be responsive across mobile and desktop screen sizes
- Collect information relevant to your website concept

This task demonstrates that you can build a purposeful, user-focused form that integrates seamlessly into a real website.

⚠ Important Note:

- ✅ Your form must collect real, relevant information suited to your website concept.
 - ❌ Do not use Lorem Ipsum or generic placeholder content.
 - ❌ You do not need to process or post form data. Focus on the structure, layout, validation, and responsiveness of the form.
-

Task Instructions

Page Structure

- A new HTML page containing your form, linked to and from your existing website pages
- Consistent header, navigation, and footer matching your Task 5.3D website

- Clear semantic HTML structure using `<form>`, `<fieldset>`, `<legend>`, `<label>`, and appropriate input elements

Form Requirements

Your form must include at least **five (5) of the following input types**, chosen appropriately for your website concept:

Input Type	Example Use
<code>type="text"</code>	Name, username
<code>type="email"</code>	Email address
<code>type="password"</code>	Account password
<code>type="tel"</code>	Phone number
<code>type="date"</code>	Date of birth, booking date
<code>type="number"</code>	Quantity, age
<code><select></code>	Dropdown list
<code><select multiple></code>	Multiple choice selection
<code><textarea></code>	Message, comments
<code>type="radio"</code>	Single choice from options
<code>type="checkbox"</code>	Multiple optional selections

Validation

Your form must include:

- Required fields marked with the required attribute
- Appropriate input types to enforce valid data (e.g., `type="email"`, `type="date"`)
- At least one field with a length or pattern restriction (e.g., `maxlength`, `pattern`)

Responsive Design

Your form page must:

- Use **CSS Grid or Flexbox** to organise the form layout

- Stack to a single column on smaller screens using a **media query**
- Use **responsive units** (rem, %) where appropriate
- Remain readable and usable on both mobile and desktop screens

Visual Integration

Your form page must:

- Use the same **CSS file** as your existing website pages, or a linked shared stylesheet
- Match the **colour palette, typography, and visual style** established in Task 1.1P and carried through Task 5.3D
- Feel like a natural part of your website — not a standalone page

Code Comments

Add brief comments in your CSS identifying key responsive decisions. For example:

```
/* Two-column layout on desktop – form fields grouped logically */  
/* Single column on mobile – improves readability on small screens */
```

Written Reflection

Include a short-written reflection of approximately 150–200 words submitted as a separate .pdf file that addresses:

- How your form page reflects the wireframe from Task 6.2C
- Any design decisions that changed during development and why
- How your layout and responsive decisions support your target users from Task 1.1P

Checklist

Before submitting, confirm your project includes:

- ☐ A new HTML form page linked to and from your existing website
- ☐ Consistent header, navigation, and footer across all pages
- ☐ At least five appropriate input types used
- ☐ Required fields marked with required attribute

- 
- ☐ At least one field with length or pattern validation
 - ☐ CSS Grid or Flexbox used for form layout
 - ☐ At least one media query for responsive behaviour
 - ☐ Form stacks to single column on mobile
 - ☐ Visual style matches Task 5.3D website
 - ☐ Shared or consistent CSS file used
 - ☐ Code comments explaining key decisions
 - ☐ Real, relevant content — no placeholder text
 - ☐ Form submission not required — validation only
 - ☐ Written Reflection
-

Deliverable:

Submit the following:

1. 4 HTML files — index.html, your two existing pages from Task 5.3D, and your new form page.
2. Your updated CSS file
3. Nine screenshots submitted as a single PDF document:
 - All four pages at mobile size (≤ 480 px wide)
 - All four pages at desktop size (≥ 1024 px wide)
 - One screenshot showing form validation when invalid input is entered
4. Your written reflection (pdf file)
