

Publishing Locally

I set everything up as instructed, and installed the dependencies with `npm ci` because I already have a package-lock.json file and I don't want to start all over again with dependency resolution and all other processes.

```
[athena@arch web_server]$ npm ci
added 68 packages, and audited 69 packages in 974ms

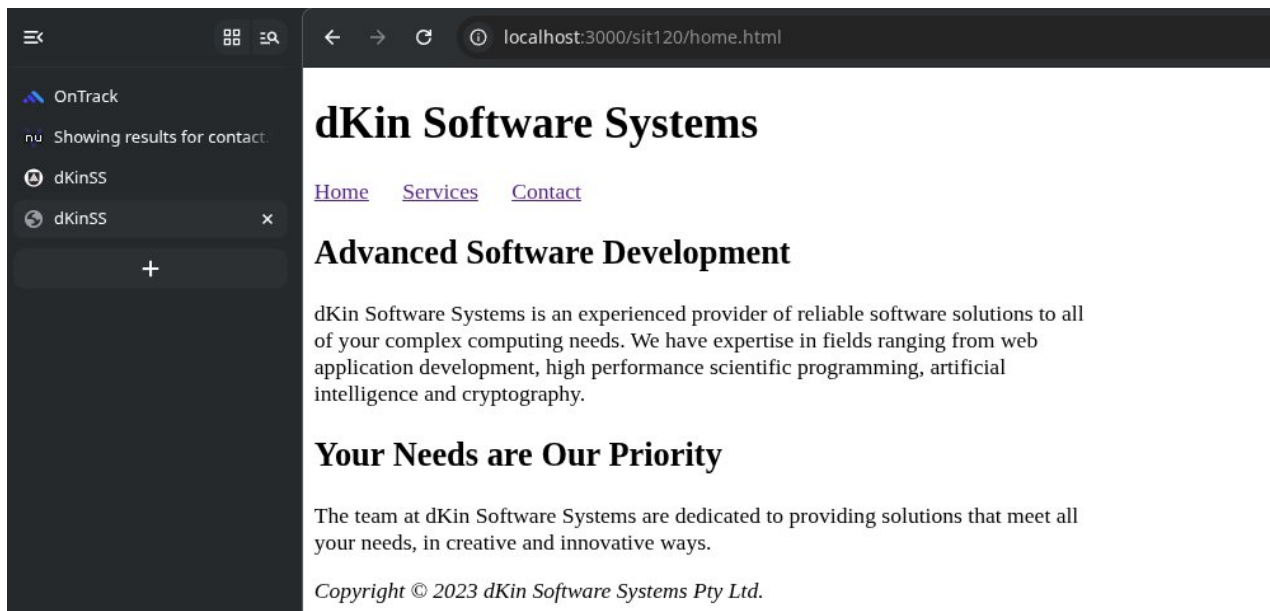

15 packages are looking for funding
  run `npm fund` for details

found 0 vulnerabilities
[athena@arch web_server]$ ls
index.js  node_modules  package.json  package-lock.json  public_html
[athena@arch web_server]$ ls public_html/
sit120
[athena@arch web_server]$ ls public_html/sit120/
contact.html  home.html  services.html
[athena@arch web_server]$ npm run start

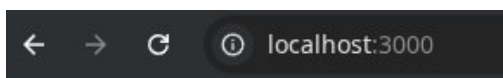

> web-server@1.0.0 start
> node .

Web server running at: http://localhost:3000
Type Ctrl+C to shut down the web server
```

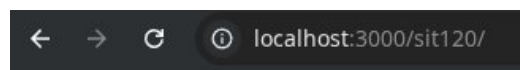

The screenshot below shows the website functioning as expected.

This short demonstration video: <https://youtu.be/IshwPRml7IY> (1m 15s) shows both of them being hosted and accessed by myself and proof that the page navigation functions flawlessly, along with additional explanations.

Cannot GET /

Cannot GET /sit120/

You get this error from the expressjs web server when you attempt to access / or /sit120/. This is because by default, and by convention, most web servers look for the index.html and serves it at /. Since our main page is called /sit120/home.html instead of /sit120/index.html, we have to mention the absolute path explicitly. This has also been explained in my quick demonstration video that was uploaded above.
