

FOOD LABEL DECODER

Read the label. Understand every additive.

LabelLens helps shoppers in Australia check ingredient lists, E-numbers, and processing aids before they put a product in the trolley.

[Scan a label](#)[Search an additive](#)

LOOKUP

Search by name or E-number

Type a code such as E211, or a common name such as sodium benzoate. LabelLens matches it to a short safety note and typical uses in packaged food.

Additive name or E-number

Or try one of these:

How LabelLens helps

Scan the pack

Photograph the ingredients list. LabelLens highlights names and codes so you can confirm what was detected before you save the scan.

Plain-language notes

Each additive is explained in everyday language, including why it is added and whether it is commonly flagged for people with sensitivities.

Compare products

Place two or three similar foods side by side to see which recipe uses fewer colours, preservatives, or flavour enhancers.

RESULTS

Additives on this yoghurt scan

These notes are written for everyday shoppers. They describe typical uses of each additive, not a personal health assessment.

Scan another label

Side-by-side additive cards

E1442

Thickener

Hydroxypropyl distarch phosphate is a modified starch. In yoghurt it holds water so the product stays smooth after sitting in a fridge.

Some shoppers prefer pots that rely on milk protein and live cultures instead of added starch.

E440

Gelling agent

Pectin is taken from fruit. It is widely used in jams and spoonable dairy foods to give a soft set.

It is generally treated as a familiar plant fibre rather than a synthetic preservative.

Live cultures

Not an additive code

Streptococcus thermophilus and Lactobacillus bulgaricus turn milk into yoghurt. They appear on the label as ingredients, not E-numbers.

LabelLens lists them so the scan is complete, then marks them as cultures rather than processing additives.

Compare across scanned products

Every scan is added to your product log. This table lines up four yoghurt tubs so you can see how their additive lists differ at a glance. Swipe or scroll sideways on a small screen to see every column.

Additive summary for four scanned yoghurt products				
Product	Serving size	Key additive	Category	Shopper note
Valley Farm Natural Yoghurt	700g	E1442	Thickener	Modified starch keeps the tub smooth in the fridge
Sunrise Greek Style Yoghurt	500g	E440	Gelling agent	Uses fruit pectin instead of a synthetic thickener
Meadow Light Yoghurt	1kg	E202	Preservative	Potassium sorbate extends shelf life after opening
Home-set Style Yoghurt	400g	None listed	No additive	Just milk and live cultures on the label

Saved for later

Additives you have already looked up stay in your list so you do not have to search for them again on your next shop.

E202 - potassium sorbate	Preservative
E160a - carotene	Colour
E621 - monosodium glutamate	Flavour enhancer
